

Software Engineering Project: Mid-Semester Evaluation

Total Marks: 20

Submission Mode: Moodle

Submission Type: One submission per project group

Deadline: 3/10/2026

1. Purpose of the Evaluation

The purpose of this mid-semester evaluation is to assess:

- Clarity of the selected problem and project scope
- Quality of requirements analysis
- Appropriateness of the proposed system design
- Current implementation progress
- Application of software-engineering practices
- Testing performed so far
- Individual contribution of each group member
- Ability of the group to demonstrate and explain its work

The project does not need to be fully completed at this stage. However, every group must demonstrate meaningful progress and at least one working end-to-end feature.

2. Expected Project Progress

By the mid-semester evaluation, each group should have completed approximately 40–60% of the project, including:

1. Clearly defined problem statement and objectives
2. Identified stakeholders and project scope
3. Functional and non-functional requirements
4. Prioritised requirements or product backlog
5. Use-case diagram or user stories
6. System architecture and database/data design
7. User-interface design or prototype
8. Initial implementation with at least one working end-to-end feature
9. Unit or functional testing of implemented features
10. Project plan and contribution record for all members

3. Moodle Submission Requirements

Each group must upload one ZIP file containing the complete project package.

A. Mid-Semester Project Report

Submit the report in PDF format using the following structure:

1. Cover page
 - Project title
 - Group number
 - Names and registration numbers of all members
 - Course name and section
 - Supervisor/instructor name
2. Problem statement and motivation
3. Project objectives
4. Scope of the project
 - Features included
 - Features excluded
 - Assumptions and constraints
5. Stakeholder identification
6. Requirements specification
 - Functional requirements
 - Non-functional requirements
 - Prioritisation of requirements
7. Requirements model
 - Use-case diagram and descriptions, or
 - User stories with acceptance criteria
8. System design
 - Architecture diagram
 - Module description
 - Database schema, ER diagram or data model
 - Important sequence, activity or class diagrams, where applicable
9. Technology stack and justification
10. Implementation progress
 - Features completed
 - Features under development
 - Screenshots of the working system
 - Important implementation decisions
11. Testing performed
 - Test-case table
 - Inputs and expected results
 - Actual results
 - Pass/fail status

- Evidence or screenshots
- 12. Project-management status
 - Original project plan
 - Current progress
 - Delayed or pending tasks
 - Risks and mitigation plan
- 13. Individual contribution table
- 14. Challenges faced and solutions attempted
- 15. Work planned for the remaining semester
- 16. References

Suggested report length: 10–15 pages, excluding appendices.

B. Source Code

Include the current source-code snapshot with:

- Proper folder organisation
- A meaningful README file
- Build and execution instructions
- Required dependencies
- Database setup instructions, if applicable
- Sample configuration file
- Sample input or test data
- Comments only where necessary
- No passwords, API keys or confidential credentials

The submitted version should run using the instructions provided in the README.

C. Requirements and Design Artifacts

Include the editable or exported versions of:

- SRS or requirements document
- Use-case diagram or user stories
- Architecture diagram
- Database or data model
- Relevant UML diagrams
- UI wireframes or prototype
- Test cases

These may be included in the report as well as separately in the appropriate folders.

D. Demonstration Video

Submit a **5–7 minute video** containing:

1. Project title and team introduction
2. Brief explanation of the problem
3. Overview of the proposed solution
4. Architecture or design explanation
5. Demonstration of the working features
6. Explanation of current limitations
7. Remaining work
8. A brief statement of each member's contribution

The screen, system output and speaker's voice must be clear.

If the video exceeds Moodle's upload limit, upload it to an institutionally permitted cloud-storage service and place an accessible view-only link in:

- The Moodle submission comment
- The project report
- A file named `DEMO_VIDEO_LINK.txt`

The group must verify that the video link works without requesting access.

E. Contribution and Project-Management Evidence

Include:

- Task-allocation table
- Weekly progress record
- Meeting log
- Git commit history or equivalent evidence
- Individual contribution declaration signed or confirmed by all members

4. Recommended ZIP Structure

GroupName_ProjectTitle_MidSem.zip

```
|
|— 01_Report/
|   |— MidSem_Project_Report.pdf
|
|— 02_Requirements/
|   |— SRS.pdf
|   |— Use_Cases_or_User_Stories.pdf
|
|— 03_Design/
|   |— Architecture_Diagram.pdf
```

5. File-Naming Convention

Use the following naming format:

Section_GroupNumber_ProjectTitle_MidSem.zip

Example: A_Group05_CampusNavigation_MidSem.zip

Avoid spaces, special symbols and excessively long filenames.

6. Academic Integrity and Use of AI Tools

All submitted work must be prepared by the group.

If generative AI tools are used for code, documentation, diagrams, test-case generation or debugging, the group must include a short disclosure containing:

- Name of the tool
- Purpose for which it was used
- Nature of the generated content

- Verification or modification performed by the students

Students remain responsible for the correctness, security and originality of all submitted material. Submitting copied work, fabricated progress, or code that group members cannot explain may result in marks being reduced or disciplinary action under institute rules.

7. Final Submission Checklist

Before uploading, verify that:

- The correct group and student details are present.
- The report is in PDF format.
- At least one end-to-end feature is working.
- Source code and README are included.
- Requirements and design diagrams are included.
- Test cases contain expected and actual results.
- The demonstration video or accessible link is included.
- Contribution and project-management evidence is included.
- AI-tool usage, if any, is disclosed.
- No passwords, API keys or sensitive information are present.
- The ZIP file opens correctly.
- One group member has uploaded the final verified package.
